

We currently have the following position to fill in Friedrichshafen:

## Software Integration Engineer (m/f/d)

You will work in the software integration team within the field of Air Traffic Management systems. As a Software Integration Engineer, you will be responsible for complex applications and work closely with dedicated development and test teams. We work with the latest technologies on the way of transformation to container-based applications and microservices platforms and their orchestration with Kubernetes.

### Responsibilities:

- Configuration and integration of internal and external software components for the delivery of systems in the Air Traffic Control environment
- Software change and release management
- Creation of software installation packages
- Management of integration and test environments
- Working with the development and testing departments

### Qualifications:

- Completed technical studies or comparable professional experience
- Several years of experience with Version Control systems and Change Management methods
- Hands on experience with the operating systems Linux (focus) and Windows
- Experience with relational databases and knowledge of SQL
- Basic knowledge of application development and application of development tools
- Analytical thinking skills and the ability to quickly familiarize oneself with new technologies and if requested take creative paths

### We offer:

- Flexible Hours and mobile working
  - Personalized career advancement, training and development
  - Work in international Teams
  - Possibility to lease a bike - Jobrad
- Employment in the Lake Constance "Four-country-region" (Germany, Switzerland, Austria, Liechtenstein) with countless leisure and recreation possibilities
